

FREQUENTLY ASKED QUESTIONS

ABOUT

TRI-VORTEX™ TECHNOLOGY & PRODUCTS

Q. How long does the Tri-Vortex™ treated Disc hold its charge, in other words, for how long is it effective?

A. Most Tri-Vortex™ treated products have a life-span of at least 3-5 years – in the case of Cell phone discs, these are only effective for about 9 months on a mobile phone.

Q. Why is stainless steel used?

A. It does not tarnish like other metals. Furthermore, Tri-Vortex™ have found that customers use these for many different applications – stainless steel is easiest to wash and clean for continued use.

Q. What happens if I drop the disc? Can it be adversely affected in any way?

A. Nothing will happen to the properties of the Tri-Vortex™ treated Disc when it is dropped. It will not work if it is melted, or something is welded, or soldered onto it – the excessive heat will change the treatment properties.

Q. Are the effects of using the Tri-Vortex™ treated products long lasting? Or do they merely relieve symptoms temporarily?

A. The Tri-Vortex™ treated Disc is no different to any other form of medication or treatment, in the sense that it is never the medication or the treatment alone that will bring about the desired result, or even eliminate the cause of the disorder.

Healing must always be considered from a holistic point of view and the Tri-Vortex™ treated Disc represents only part of a much bigger healing picture – body, mind and spirit. True healing will only come about when people are prepared to make the personal shifts and changes that are required e.g. hydration, diet, exercise, mindset, habits, prayer & faith, self-love, natural medication, etc..

Q. Is the Tri-Vortex™ treated Disc affected by extremes of temperature?

A. The Tri-Vortex™ Disc will be effective in more extreme temperatures than the human body can withstand. If by extreme you mean melting it, or treating it with liquid nitrogen, then yes, it will be affected.
