

PRODUCT AUTHENTICATION 2D BARCODE

All the Tri-Vortex™ products have a Barcode similar to this the one displayed below, and it should be placed on the packaging. If it has not, then please **question the validity of the product**, as it is likely not to be a Tri-Vortex™ treated item.

The 2D Barcode is an innovative concept that has been implemented by Tri-Vortex™. Tri-Vortex™ has gone to great lengths and used state-of-the-art technology to ensure that their products are:

- Tri-Vortex™ technology-treated.
- The Tri-Vortex™ treated product is not a fake, grey, or a parallel import.
- That there is total transparency in the supply chain.
- Can **globally be identified as Genuine** via a website.
- The date of the last Tri-Vortex™ treatment can be **verified** and the product warranty can be checked.
- The 2D label cannot be copied or replicated.
- Any attempts to falsify the label can be identified.

Scan the label on a flatbed scanner, or take a photograph of the label and e-mail it to Tri-Vortex™.

Tri-Vortex™ offers this 2D Product Authorisation Labelling as a service to other companies wanting to ensure their customers **get the real thing – every time**.
